### Course objectives
- Can understand and use familiar expressions and very basic phrases aimed at meeting concrete everyday needs
- Can introduce themselves and others and ask other people questions about their person
- Can communicate in a simple way if the other person speaks slowly and clearly and is willing to help

### Course contents
- **Grammar**
  - Prepositions
  - Possessives
  - Dative verbs
  - The imperative-Simple past ‘war/ hatte’
  - The perfect form
  - Word formation
  - Subjunctive II
- **Topics**
  - Apartments and houses
  - Parts of the body
  - Describing people and their character
  - Household activities
  - Weather
  - Holidays and celebrations

[http://www.europaeischer-referenzrahmen.de](http://www.europaeischer-referenzrahmen.de)
### Recommended literature

### Teaching methods

- Partner and group work
- Explanation of topics by the lecturer
- Presentations and discussions
- Feedback from the lecturer
- Listening exercises

### Assessment method

Written examination, 90 min.

### Language of instruction

German

### Prerequisites

Successful completion of Level A1/Parts 1 and 2 (88121)

Course descriptions for German language courses at higher levels: [https://th-deg.de/en/students/language-electives#german](https://th-deg.de/en/students/language-electives#german)

**Course level**

- Can understand the main ideas of complex text on both concrete and abstract topics, including technical discussions in his/her field of specialization
- Can interact with a degree of fluency and spontaneity that makes regular interaction with native speakers quite possible without strain for either party
- Can produce clear, detailed text on a wide range of subjects and explain a viewpoint on a topical issue giving the advantages and disadvantages of various options

**Course objectives**

This course aims to deepen students’ encounter with the English language in a technical context by giving practical training in specialized vocabulary, grammar and language usage. The four cardinal language skills – listening, speaking, reading, and writing – will play an integral role in this training. The course is designed to be relevant and interesting for engineering students and will be adapted to their learning needs and study areas. By the end of the course, participants should have a more comprehensive understanding of, and enhanced fluency in, the English language in an engineering context.

http://www.europaeischer-referenzrahmen.de/

**Lecturer**

Neal O’Donoghue, MA
Course contents

Obligatory topics (60 %):
• Numbers and mathematical operations
• Shapes and dimensions
• August 2017
• Basic physics and the scientific worldview
• Materials and their properties
• Case study on an area related to technology
• /physics/engineering
• Grammar/ communication skills

Variable content (40 %):
Variable content will be determined on the basis of a student survey conducted in the first session.
Current world events (including news events and popular culture) and recent technological innovations may be used as a basis for discussions.

Teaching methods

Teaching methods focus on improving the four cardinal language skills and include group discussions and group projects; individual work; mini-presentations; role-plays; close reading and listening activities; dictation; grammar games; and various follow-up viewing and writing activities.
Work not completed in class should be done at home. Self-study assignments will be set on a weekly basis.

Assessment method

Written exam (60 min)
No dictionaries are allowed.

Exam structure:
• Part 1: Listening comprehension(s)
• Part 2: Reading comprehension(s)
• Part 3: Vocabulary and technical content
• Part 4: Grammar (maximum 10% of total exam points, excluding writing exercise)
• Part 5: Writing composition (150-200 words)

The exam will be based on topics covered during the semester.

Intercultural Training for Germany and Bavaria

**Course title**  
Intercultural Training for Germany and Bavaria

**ECTS**  
1

**Course type**  
Elective

**SWS**  
1

**Semester**  
Winter and summer

**Workload in hours**  
30 hours

**Name of Instructor**  
Lisa Werner

**Course objectives**  
Participants get an understanding of the different theories of “culture” and learn about stereotypes and traditions in Bavaria. Furthermore, the participants get information on Germany and Bavaria as well as the Deggendorf Institute of Technology.

**Course contents**

<p>| | |</p>
<table>

<td>Manuela Krawagna-Nöbauer</td>
</tr>
</tbody>
</table>

## Course objectives
Participants get a deeper understanding of the traditional and contemporary Bavarian culture by integrating knowledge about customs, language, and history with culturally routed events.

## Course contents
1. Hard facts
   1.1. History
   1.2. Demographics
   1.3. Geography
2. Customs and rituals
   2.1. Traditional
   2.2. Contemporary
3. Language
4. Events

## Teaching methods
The course is organized according to four pillars:
1. Hard Facts
2. Customs and Rituals
3. Language
4. Events

Whereas hard facts are taught in a classical lecture style, students should experience aspects of the culture in a lively manner through knowledge dissemination of cultural experts, off-campus seminars at events of traditional cultural heritage.
origin, as well as learning and engaging in cultural rituals themselves. The aim is to deepen and complement the contents taught in the Orientation Week.

At the end of this course, students will be able to:

- Recognize key elements that go into persuasive storytelling
- Identify types of stories and their purposes
- Create compelling stories to achieve business goals
- Apply acquired knowledge to develop a compelling story to persuade others to think or act in a different way.

## Course contents

- Introduction to Business Storytelling
- Power of Business Stories: when and why to tell them
- Types of Business Stories and Their Purposes
- Structuring Your Story to Engage the Audience
- Storytelling techniques
- Enhance Your Storytelling Skills

**Course objectives**

Globalisation demands that managers possess the basic skills required to work together in international teams. Many companies actively encourage the development of these skills through teambuilding or team development programs. Especially for change management, team development plays an increasingly important role. Here the critical goal is to optimise how the group members work together as a team. Key factors affecting a team’s success include organisation, structures, processes, culture and relationships.

International Team Building is conducted at the beginning of the semester as a three day off-campus seminar. The hands-on, outdoor training gives the students intensive exposure to the multifaceted nature of group dynamics.

By working together to solve complex problems and through structured feedback sessions, the participants become sensitised to the roles they assume in group interactions, to the limitations imposed by the German and their own cultures, and to the conditions required for effective team work.
The course supports the integration of foreign students into campus and social life and helps build lasting working relationships among all participants.

The skills of giving and receiving of feedback are learned in the protective atmosphere of small groups through intensive exchanges between instructors and participants. This leads to improved observation and communication skills.

Moreover, the group members continually switch roles. This promotes a deeper understanding of social interaction, helps members to reflect on their contribution to the group process, encourages members to experiment with new behavioural concepts, and improves the group’s capacity to co-operate and perform. Final feedback rounds offer the possibility to align the members’ self-images with the perception others have of them, to reduce “blind spots”, to increase self-confidence and their ability to reflect.

The capacity to give appropriate feedback in various situations, to monitor one’s self image as well as the consequences of one’s own behaviour form the basis for a successful career in management.

Course contents

Group dynamics, processes and structures in groups; Roles in groups (roles in tasks and supporting roles); Group leadership; Effect of one’s actions in groups; The “give and take” of feedback; Self-image and how others see you; Communication levels (content versus relationship); Conditions for successful co-operation; Cultural influences on teamwork.

Note: The main emphasis of this course is not the conveyance of theoretical knowledge, but rather learning directly from experience. The theories on which the intervention and evaluation sessions are based are taught in the course “Human Resources Management”.

Teaching methods

This course is organised as an interactive experience and activity-based training program. With the help of complex tasks, timed interaction activities combined with elements of surprise, classical outdoor training exercises, moderated feedback and reflection sessions, participants are taught the necessary conditions for effective teamwork.

The teaching methods are based on the principles of self-organised learning. The instructors define their roles in terms of Schein’s model of process consulting.
They intervene by questioning the participants in a manner designed not only to examine their perspectives, but to introduce new perspectives and stimulate the group’s creative process.

The responsibility for these process remains with the participants.

In the context of the learning environment, the students enjoy the opportunity to increase their observation, communication, co-operation, self-reflection, teamwork and management skills as well as their self-confidence.

In addition, the course offers the students the chance to network and develop sustainable work relationships at the start of their studies.

**Suggested Literature**

Baron, R. S.: Group Process, Group Decision, Group Action, 2nd Ed., Buckingham, 2003;

**Notes**

The weekend seminar is characterised by team teaching in a mountain hostel. The team consists of Prof. Dr. Nagengast and trained tutors selected from participants in the course „Train the Trainer“. The tutors make it possible to conduct the training in small „protected“ groups (around 8) and to give qualified feedback.
## Databases

<table>

</tr>
</tbody>
</table>

### Course objectives

After this module students should
- be able to describe the database design process,
- know the elements of the Entity-Relationship-Model,
- can build an Entity Relationship Model for a specific case,
- can normalize a database design,
- be able to manage a database through a database management system,
- be able to query a database using SQL,
- know the core components and functionalities of a database management system.

| Workload in hours | Total: 150  
In-class: 60 / Self-study: 45 / virtual learning: 45 |
| Lecturer     | Prof. Dr. Gökçe Aydos                    |

After successful accomplishment, the students can:

**Professional competences**
- summarize the challenges of biomedical text analysis
- list various scientific text resources and differentiate them
- outline the motivation behind ontologies for knowledge representation

**Methodological competences**
- implement shell scripts for automating information retrieval, text processing, and semantics processing
- breakdown given shell scripts into various components, tweak it for further purposes, and localize errors
- apply XPath expressions to extract data from XML files
- evaluate a shell script regarding performance considerations and suggest improvements
- apply regular expressions on text to extract relevant information
- find correlations between concepts (e.g., does caffeine lead to malignant hyperthermia?)
- implement Python programs which can solve simple text processing and automation problems
**Social competences**
- give constructive feedback to peers in context of peer-assessed exercise

**Course contents**
- data and text processing using the shell
  - biomedical text resources
  - semantics
  - data retrieval
  - data extraction
  - task repetition
  - XML processing
  - text retrieval
  - text processing
  - pattern matching
  - regular expressions
  - tokens & entities & relations
  - semantics processing
  - classes
  - entity linking
  - performance considerations
- programming with Python
  - control structures
  - data structures
  - objects & algorithms

### Course objectives

In recent years, plenty of companies have started to invest in AI in order to remain competitive. However, some 80% of AI projects fail in reality. There is clearly an acute need in industry for experts that get the big picture of what needs to be done so that AI adds value to companies. This course has been offered since 2020 and was at that time the first one world-wide to addresses that need. Students will learn a number of challenges, both technical and managerial, that companies typically face when becoming AI-driven companies. They will also learn respective best practices along the entire data journey and how these lead to deployed applications that create real business value.

### Course contents

- Introduction: how AI is changing our society, selected examples of successful and unsuccessful AI projects and transformations
- History and promises of AI: Dartmouth conference, AI from 1955 to 2011, AI winters
- Deep learning era: breakthroughs, DeepMind, promises and hypes, no free lunch theorem, AI innovation in China, technological singularity
- Contemporary problems: assurance, alignment, regulation, explainable AI, ethics, patents
- AI transformation of companies: opportunities, challenges, best practices
- Case studies on how to turn companies into AI-driven companies

## Course objectives

This class provides students with an introduction to Quantum Computing (QC), which looks promising to solve certain computational problems substantially faster than classical computers. QC began in the early 1980s and in recent years, investment into QC research has increased in both the public and private sectors. Students will acquire knowledge in QC and its applications in various domains such as machine learning and cryptography. They will also be able to elaborate it further in the future, for example in projects or further studies. Overall, QC is a cutting-edge field, with many high-pay opportunities for graduates.

## Course contents

- Introduction: history, comparison to traditional computing, applications, business potentials
- Foundations: complex numbers, complex vector spaces
- Systems: deterministic systems, probabilistic systems, quantum systems, assembling systems
- Quantum theory: states, superposition, observables, measuring, dynamics, assembling quantum systems, entanglement
- Architecture: bits and qubits, classical gates, reversible gates, quantum gates, no-cloning theorem, mixed states
- Selected algorithms: Deutsch's, Deutsch-Jozsa, Simon's, Grover's, Shor's
- Theoretical computer science: limits of quantum computing, complexity classes

**Course objectives**

- explain the principles and limitations of wireless communication,
- explain important technical aspects of current wireless communication systems,
- compare and contrast different wireless communication systems based on an understanding of shared challenges (such as mobility management),
- explain the principles of medium access control and why they have been designed in a certain way,
- summarise key functions and principles behind different architectures for mobile and wireless communication systems,
- critically evaluate different properties of a mobile communication system, taking into account design considerations, capacity, and limitations in relation to the technology in question.

**Course contents**

The course treats the principles of mobile and wireless, including the function and operation of modern mobile and wireless communication systems and networks related to architecture, protocol, and algorithms. Current wireless
systems, such as cellular systems and mobile Internet, including the WLAN standard IEEE 802.11, are used as examples to explain these principles.

The course includes components and exercises that treat these topics in-depth.

The course covers the following:
- Radio signals
- Coding, modulation, and multiplexing
- Medium access
- The basic principles of cellular systems and networks - WLAN (e.g. WiFi) and WPAN (e.g. Bluetooth)

Advanced Automation

**Course title**  
Advanced Automation

**ECTS**  
5

**SWS**  
4

**Semester**  
Winter

**Workload in hours**  
Total: 150 / In-class: 60 / Self-study: 90

**Lecturer**  
Prof. Dr. Terezia Toth

---

In the subject Advanced Automation, students obtain an overview on how programmable logic controllers (PLCs) work, as well as basic hardware and software requirements.

They learn the standardized (IEC61131-3) and manufacturer-specific (TIA Portal) programming options. They learn how to use visualization software for the user interface.

The students acquire the basic competence to understand automated processes in the automotive industry, power plants, chemical industry, building technology and transportation. Thus, the students are able to shape the digital transformation of the industry.

**Course objectives**

**Professional Skills**

The students are familiar with the concepts and components of a modern automation system including the structure and functionality of industrial communication systems, also with regard to safety and security.

They are able to analyse, classify and solve simple tasks in automation technology.
The students know the requirements of hardware and software for a Programmable Logic Controller (PLC). They know the structure and the way a PLC operates. They are able to create PLC programs. By using visualization software, they can demonstrate the processes.

**Methodological Skills**

The application-oriented knowledge allows the students to compare advantages and disadvantages of the individual industrial bus systems, to examine in contrast the advantages and disadvantages of the individual programming languages to find optimal solutions.

**Soft Skills**

The students work on problems in a focused and independent way.

They can communicate their solutions both verbally and in writing in appropriate technical language.

They learn from mistakes, can assess and improve their own abilities.

They are able to work actively as a team.

**Course contents**

1. Function of SPS
   1.1. Hardware requirements
   1.2. Current embodiments
   1.3. Environmental conditions
   1.4. Real-time requirements
2. Programming languages
3. Presentation of automation technology with regard to industrial communication
   3.1. ISO / OSI model in industrial communication
   3.2. Automation pyramid
   3.3. Vertical communication
   3.4. Structure and functionality of common communication systems
