Module Description

General Business

Faculty AWW – School of Management

Summer term 2022
CONTENT

- A Business Process Case Study in SAP for Beginners ...........3
- Advanced Methods in Procurement ................................5
- Basics Sustainability ..................................................7
- From Data to Big Data Analysis and Business Intelligence ....9
- Communication and Presentation Techniques ..................11
- Cross Cultural Management ........................................13
- Global Leadership ......................................................16
- Introduction to Air Transport Management .....................18
- Market Research incl. SPSS ........................................19
- Digitalization in Retail ...............................................20
- Public Economics (Virtual Class) ....................................21
A BUSINESS PROCESS CASE STUDY IN SAP FOR BEGINNERS

Lecturer | Prof. Dr. Dieter Rummler
Course number and name | A Business process case study in SAP for Beginners
Semester | GB
Duration of the module | 1 semester
Module frequency | yearly
Level | undergraduate
Semester periods per week (SWS) | 4
ECTS | 5
Workload | Time of attendance: 60 hours
| self-study: 90 hours
| Total: 150 hours
Type of Examination | Written exam
Duration of Examination | 90 min.
Language of Instruction | English

Module objective

It will be shown to beginners in the area of Enterprise Resource Planning Systems (ERP) the functions of ERP systems. This is done by carrying out a business process from entering a sales order to its production and delivery. At the same time the consequences in finance and accounting are shown. This makes connections in business administration visible.

SAP R/3 is used for this. No prerequisites are required for this. The user interface, the handling of SAP R/3 and the necessary SAP transactions are explained. Essentially, in group work, an SAP case study created by myself is carried out by the students on their computers.

Learning Content

- What is ERP
- User interface and handling of SAP R/3

Case study:

- Master data
- Sales forecast
- Customer order
- MRP run
- Purchasing the components
• Production of the assembly and the final product
• Delivery of the sales order
• Invoicing
• Incoming payments
• Finance
• Controlling
### Module objective

This course is split into two parts:

**Part 1:**
The broad scope of this course starts from principles of sourcing to strategic procurement decisions like low cost country sourcing, procurement concepts like consignment inventory, vendor managed inventory. Prices and Total Cost are analyzed, suppliers evaluated, and development strategies discussed.

**Part 2:**
The second part focuses on quantitative methods: Times series are analyzed and different forecasting methods needed for purchasing decisions are trained. Based on this disposition decisions - timing and quantity of orders - are made.

### Learning content

**Part I:**
1. Development of Purchasing Function
2. Leverage Effect of Procurement
3. Best Cost Country Sourcing
4. Sourcing Strategies
5. Price and Total Cost Analysis
6. Supplier Evaluation and Development
7. Replenishment Strategies & Procurement Logistics
Part II:
1. Linear and Multiple Regression
2. Time Series and Forecasting Methods
3. Disposition and Ordering
4. Newsvendor and other Models

Methods

The course features lectures introducing to strategic sourcing and procurement logistics theory in an international business environment, focused lectures based on selected procurement categories, class discussion, group activities, situational analysis and comparison, and integrative experiential learning. Self-managed student work teams develop procurement strategies based on given case studies, e.g. for steel bulk buying or specific injection molded plastic parts. Students are confronted with procurement decisions from the real world cases and then compare their responses to actual management actions.

Recommended Literature

Course Objective

The consistent overstepping of planetary boundaries by humans is the cause of many environmental problems and social tensions regionally, globally and between generations. For sustainable development in the sense of a fair distribution of resources, an interdisciplinary approach to solutions and the consideration of the interrelationships of social, ecological and economic factors and actors are indispensable. The course "Basics Sustainability" teaches the most important sustainability models and analysis methods for sustainable development. From environmental and resource economics, basic methods for a fair distribution of environmental goods as well as environmental policy instruments and tools for sustainable spatial design are presented. With regard to materiality, the goal is the use of renewable raw materials for the production of materials and products, the recycling or pollutant-free landfilling of existing products and materials, and the optimisation of natural processes from a material and energy point of view. Against the background of climate change, students learn about current technologies and developments and assess measures in the field of renewable energy systems in the context of grid expansion, energy distribution and storage technologies.

Course Contents

The first two chapters are on-site lectures in Deggendorf, the third and fourth chapters are self-study online lectures (vhb).

1. General principles of sustainability
   1.1 Introduction to sustainability
   1.2 Social transformation
   1.3 Corporate responsibility
Course Structure and Methods

General principles of sustainability: Students learn about the interrelationships of social, ecological and economic factors and actors and apply basic sustainability models and analysis methods.

Economic framework of sustainability: Students learn methods of environmental and resource economics and assess the use of sustainability policy instruments.

Materiality and sustainability: Students understand the material cycles of the earth and learn about the production of materials from renewable raw materials and the recycling and disposal of products.

Energy and sustainability: Students understand the basics of climate change. They learn about current technologies and developments and assess measures in the field of regenerative energy systems in the context of grid expansion, energy distribution and storage technologies.

**Module objective**

This course brings you from Data to Big Data Analysis and Business Intelligence.

You need basic knowledge in mathematics. No programming skills necessary. All used tools you can download for free.

In EXCEL we will work with diagrams and Power Pivot tables, after an introduction to fundamentals in EXCEL. We will enter more intelligence to data with the tool POWER Business Intelligence (BI). We will add interesting insights to data to find information which are important for our business. We will also look forward to work with artificial intelligence to find relationships and correlations between data, and we will classify data.

After this course, the student understands the way how to get from pure data from different sources important information, insights and knowledge for daily and strategic company decisions.

**Learning Content**

**Part 1 – Spreadsheet calculation**

- Basics
- Addressing
- Data maintenance
- Formula and functions
• Reports
  1.1. Spreadsheets
  1.2. Subtotals
  1.3. Diagrams
  1.4. Pivot tables

Part 2 – Bringing data together from different sources
Part 3 – Creating web and mobile phone dashboards
Part 4 – Looking for insights
Part 5 – Classification of data
Part 6 – Adding artificial intelligence to data

Module Objective

The main goal is to improve students listening, speaking and presentation skills through theory, observation, practice and group feedback. They also learn to argue in debating sessions.

Besides this they will develop the skills that are necessary to prepare presentations, to speak with confidence and to plan and use visual aids effectively. Students learn what communication is, how culture, language choices and non-verbal clues affect the image presented, how to organize a message, how to make persuasive presentations. Students also learn how to be effective listeners and give qualified feedback.

Weight

none

Entrance Requirements

none

Learning Content

The course covers communication and feedback, body language, organizing thoughts and data, voice, non-verbals and audience interaction and visual aids.
Students are expected to incorporate the following themes into their presentations:
Basics of successful presentations
How to use visual aids including PowerPoint
How to avoid over-presenting with PowerPoint and other media
The logistics of presenting.
What to do when things go wrong

Students will develop and improve these skills during debates:
What constitutes effective leadership behavior?
How to give and receive feedback in a debate?
What are some obstacles to effective communication and how these can be overcome?
What does a presenter need to know about nonverbal communication?
When is assertive behavior appropriate in communicating?
What are the elements of persuasive presentations?
What are effective response styles?
How to argue convincingly?
How can a verbal confrontation produce its intended result?
What are effective ways to organize a message?

Teaching Methods

The course is conducted like a professional workshop. Students begin by making short presentations on a variety of theoretical and practical topics related to oral presentations and communication techniques. After individual feedback and coaching and discussion rounds with peers, students then evaluate a professional presentation and develop guidelines for improving their own subsequent presentations.
Students also participate in a workshop to learn the principles of debating techniques. Students get the opportunity to practice in a small group forum.

Module Objective

Cultural differences among international business partners, customers and suppliers often result in tension and misunderstandings. Managers who competently navigate in different cultural environments can contribute substantially to the success of globally active enterprises.

A condition for the acquisition of 'intercultural competence' is the recognition that one's own actions are influenced by one's own cultural values and norms. Reflecting on one's own cultural background forms the basis for the understanding of foreign cultures.

In the first part of the course the participants acquire the knowledge they need to explain and understand various cultures. Through the comparative study of cultures, they discover the relevance of the cultural framework to management theory and for explaining management behavior.

Participants learn how to independently apply the 'culture assimilator' technique to broaden their knowledge through a qualitative research project. This involves soliciting international managers and collecting 'critical incidents' of cross cultural business interactions, which are then analyzed with the help of theory. Carrying out qualitative interviews with members of foreign cultures further develops the participants' social and intercultural skills.

The second part of the course is conducted as an off-campus intensive 'social and intercultural competence'-training workshop. Here the results of the culture-assimilator research projects are presented through role-playing in situational re-enactments. The implications are further clarified through a variety of interaction exercises.
The social and intercultural competence training assists the participants in their ability to reflect on cultural identities, to avoid value judgments in their perception of foreign cultures, to empathize and accept differences as well as to develop additional options for actions international managers can take.

**Learning Content**

1. Introduction: Cultural Differences

2. Defining Culture
   - Examples
   - The Characteristics of Culture
   - The Layers and Elements of Culture

3. Comparing Culture
   - The Impact on the Individual: the „Culture Shock“
   - Culture Contexts: Hall
   - Culture and the Workplace: Hofstede
   - Gesteland’s Cultural Patterns

4. Summary

Additional course materials provided by the vhb-course „Interkulturelle Kompetenz“ (English Version), Augsburg University, Prof. Dr. Martina Rost-Roth:

Module 2: Intercultural Awareness
   - Lesson 1 - Intercultural Awareness

Module 3: Assessing Culture
   - Lesson 1 - Definitions of Culture
   - Lesson 2 - Dimensions of Culture
   - Lesson 3 - Leadership Styles and Cultural Standards

Module 5: Intercultural Business Communication
   - Lesson 3 - Intercultural Training

**Teaching Methods**

The course begins by conveying the fundamentals of cross-cultural management via theoretical lectures, self-organized virtual learning (vhb-course) and moderated discussions. Since most of the participants have intercultural experiences assembled from a wide variety of cultures, the theory can be directly tied to many of the individual experiences.
The theoretical fundamentals are then extended through the development, application and presentation of the culture assimilators. The qualitative research projects are performed in groups organized along the principles of self-organized learning. The projects help develop individual competence in applying the scientific method and also further the development of presentation, social and intercultural skills.

Short case studies, ‘critical incidents’, are selected from the international business world. Explanations and analysis of these cases support the integration of the participants’ existing management knowledge with intercultural perspectives.

Social and intercultural skills are further developed in the training workshop through role playing, interaction exercises, problem solving tasks, simulations and feedback rounds.

**Learning Content**

**Topics Part 1: Person**

- Historical Development of Leadership
- Leadership Styles
- Creative Leadership
- Individual Leaders
- Leadership Test: What Kind of Leader Are You?

**Topics Part 2: Structure**

- Organisation
- Organisational Analysis
- Organisational Development
- Modern Organisations: Agile & Holocratic Organisations

**Topics Part 3: Communication**

- Corporate Communication
- Communication Strategy
- Public Relations
- Product Communications
- Sports & Lifestyle Communications
- Sustainability Communications
- Internal Communications
- Crisis Communications
- Global Marketing
**Teaching Methods**

Lectures, discussions, exercises, group work and case studies

</tr>
</tbody>
</table>

**Learning content**

The Introduction to Air Transport Management course is designed to give you a brief insight into the world of airlines, airports and air transport industry in general by covering topics such as, but not limited to:

- Airline business
- Airline operations
- Airline marketing
- Aircraft fleet planning
- Airport business
- Air transport economics
- Quality management of airline operations
- Statistical Analysis
- Research Methods and Forecasting
MARKET RESEARCH INCL. SPSS

**Module objective**

This lecture should lead you to an understanding of the uses and abuses of market research.

After completing the module, you should be able to:

- evaluate the usefulness of market research for the problem you are involved with
- discuss appropriate types of research with confidence
- set yourself realistic expectations regarding the results/timing
- understand the importance of market research
- perform a complete market research project
- know the statistical software SPSS and can operate basis analysis
- analyze questionnaires under quality aspects

Module objective and Learning content

**Digital Transformation in Retail Organizations I (2SWS):**
- E-Commerce and Omnichannel Retail
- Digital Strategy and disruptive Digital Business Models
- Organisational and cultural challenges of digital transformation in the retail industry
- Outlook: Current and future digital trends

**Digital Transformation in Retail Organizations II (2SWS):**
- Digital Marketing
- Customer Relationship Management
- Customer Data and Analytics
- Outlook: Potentials of Artificial Intelligence for Retail Operations

Objectives

The main object of the financial science is the apprenticeship of the state income and issues, also called „economy of the public sector“.

The introductory event deals with the question of the role which the state should take in a social market economy.

A main focus lies in the investigation of the typical facts of the matter of market failure which could justify state interventions in the markets – provided that no simultaneous state failure is to be expected. The problems of the most different externalities of private goods and questions of the optimum supply decision and decision of utilization of public goods are looked thoroughly here.

Nevertheless, markets can fail not only in allocative regard, but also in distributive regard, possibly if the market supply of goods contradicts central justice images of the society.

Hence, the event mediates of distant bases of exogenous and endogenous concepts of justice.

Learning content

Introduction

- Introduction to the financial science

Externalities

- Positive and negative external effects
- Graphic and mathematical derivation of the welfare losses
- Pareto-relevance of externalities
- Financial externalities
- Internalization by Pigot-taxes
- Stamp duties on capital issues
- Trade with issue certificates
- Infra-marginal externalities
- Fixed externalities
- Coase theorem

Public goods
- Criteria more purely of public goods
- Impure public goods
- Allmende goods (common goods)
- Toll goods or collective goods
- Supply decision
- Crowding costs and decision of utilization

Introduction to the tax effect theory
- Tax-induced welfare losses (Excess Burden I)
- Tax-induced welfare losses (Excess Burden II)
- Introduction to the optimum tax theory

Concepts of justice
- Exogenous justice
- Endogenous justice
